EDUCATION

• StonyBrook University

StonyBrook, NY

Bachelor of Science in Computer Science Honors & Applied Math and Statistics

May 2026

- **Relevant Coursework:** Software Development, Software Security, Systems Fundamentals 1 & 2, Honors Data Structures & Algorithms, Artificial Intelligence, Honors Analysis of Algorithms, Honors Theory of Computation, Data Analysis, Probability Theory, Linear Algebra, Calculus III

SKILLS

- **Languages:** JavaScript | C | C# | C++ | Python | HTML/CSS | Java | SQL
- **Frameworks:** Node.js | React | Express.js | .Net | Bootstrap | Flask
- **Tools:** Linux | Docker | Git | VS Code | PyCharm | Eclipse | Jupyter
- **Certification:** AWS Certified Cloud Practitioner

EXPERIENCE

• NYC Health + Hospitals | Elmhurst

Elmhurst, NY

Software Engineer Intern

May 2024 – Present

- **Employee Timesheet:** Contributed to improvement of hospital timesheet for employees in backend using **JavaScript**, **Node**, & **Express** to accept different variations of time entries and autocorrect entered format to be suitable for calculation, resulting in **27%** less time sheet errors requests
- **Parking Request Form:** Developed a web application using **.NET Core MVC architecture** for managing employee parking requests. Built a dynamic frontend and scalable backend integrated with **Microsoft SQL Server** for efficient data retrieval. Implemented server-side validation and optimized rendering for improved user experience.
- **Nurse Board Application :** Developed an application that pipelined and sorted hospital information along with other hospital news, displaying it on screens in various departments. Utilized **WebSockets** for real-time updates, **React** for the dynamic frontend, and a **PostgreSQL** database for storing information.

• Stony Brook University

StonyBrook, NY

Teaching Assistant - Data Structures & Algorithms

Jan 2024 – May 2024

- **Recitations:** Instruct 3 individual 1-hour long recitation sessions per week on Data Structures and Algorithms in Java consisting of 30 students each (Stony Brook University CSE 214)
- **Problem Creation:** Create recitation, homework & exam problems relevant to Data Structures and Algorithms.

• Derive Technologies

Wall Street, NY

IT Intern - Server Room and Connectivity Setup

December 2022 - January 2023

- **Mount Sinai Data-Center Setup:** Set up and maintained data centers for upcoming and established technical facilities in Manhattan by maintaining core infrastructure for network and securities, cloud connections and workplace design
- **Connection to CSP:** Server room setup and maintenance to ensure server connectability for Mount Sinai database to CSP

PROJECTS

• Stock Market Predictor

TensorFlow, PostgreSQL, Keras, Matplotlib, BeautifulSoup

- **Webscraping & Storage:** Retrieve up to date historical data from any stock requested using BeautifulSoup & stored in SQL database
- **Prediction:** Utilizing linear regression and introductory neural networks to predict direction and margin of possible price range over requested period of time
- **Accuracy Evaluation:** Comparison and calculation of prediction accuracy on different metrics ie. coefficient of determination, mean squared error, mean absolute error etc. along with graphing in Matplotlib

• Chat-Forum Website (Modeled from Reddit)

React, JavaScript, HTML, CSS, Node.js, Express, MongoDB

- **Data Management:** Implemented a RESTful API with Node.js and Express to store and manage users, communities, posts, linkflairs, and creation dates in MongoDB
- **Dynamic UI:** Created a responsive, seamless user interface in React, enabling dynamic state switching for smooth navigation between communities and posts, and creation forms
- **Searching & Sorting:** Integrated search functionality for posts and communities, allowing users to filter content based on various criteria such as date and relevance
